

MANITOBA CHIMNEY SWIFT INITIATIVE ROOST AND NEST SITE DATABASE 2014-2017																								
Last modified Oct. 18 T.P.																								
STATUS before 2014 has been brought forward from: MCSI Roost and Nest Site Database 2007-2014 (posted on the MCSI website, in Results: http://www.mbchimneyswift.com/Documents/2014_sites.pdf).																								
TYPE is roost (R) or nest (N) site; roost sites are used during the roosting hour = 1/2 hour before to 1/2 hour after sunset, when chimney swifts enter to rest for the night (early/late entries are possible; exits are made rarely) - chimney swifts leave the site the following morning within 1/2 h of sunup; nest sites are used during the daytime also i.e., entry/exit activity is seen outside of the roosting hour.																								
S/F = successful fledging (S) or failed nesting attempt (F) at a nest site.																								
TYPE and nest S/F designations may be blank if insufficient information is available to categorize the site.																								
MAX is the peak number of swifts seen entering/exiting the site during the season; = date of first occurrence if seen multiple times over season.
