

**MANITOBA CHIMNEY SWIFT INITIATIVE ROOST AND NEST SITE DATABASE 2019**

Last modified Jan 17 2020 by A.S.

See MCSI website for database from 2014-2018

(posted on the MCSI website, in Results: [http://www.mbchimneyswift.com/Documents/2014\\_sites.pdf](http://www.mbchimneyswift.com/Documents/2014_sites.pdf)).

TYPE is roost (R) or nest (N) site; roost sites are used during the roosting hour = 1/2 hour before to 1/2 hour after sunset, when chimney swifts enter to rest for the night (early/late entries are possible; exits are made rarely) - chimney swifts leave the site the following morning within 1/2 h of sunup; nest sites are used during the daytime also i.e., entry/exit activity is seen outside of the roosting hour.

S/F = successful fledging (S) or failed nesting attempt (F) at a nest site.

TYPE and nest S/F designations may be blank or ? if insufficient information is available to categorize the site.

MAX is the peak number of swifts seen entering/exiting the site during the season.

DATE OF MAX is the date on which the peak number of swifts seen entering/exiting the site occurs. Date of first peak occurrence if peak happens multiple times over season.

Greyed-out lines indicate chimney is demolished or no longer suitable for Chimney Swifts in some way (such as capped)
